RHINO 4X4 EVOLUTION 3D®
FRONT BUMPER

The new Evolution 3D Bumper will evolve your 4x4 vehicle into an aggressive off-road machine without compromising its stylish lines and aesthetics. This front replacement bumper is now available with several exciting new features that will satisfy any off-roading adventurer. It is manufactured from 3mm and 5mm all-steel material to protect your engine's vitals. It boasts full winch compatibility and two snatch-rated recovery points, as well as a class-leading approach angle.
This bumper comes standard with a heavy-duty bash plate that continues all the way to the cross-member. Other brands charge a premium for this extra feature.

The Plug and Play LED fog lights are fully compatible with the existing electrics. The Evolution 3D Bumper includes provision for front parking sensors.

COLOUR OPTIONS

The Evolution 3D Bumper is zinc coated for corrosion protection and finished in a hard-wearing powder coat. Standard colours are white or matt black. The middle section of the bumper is available in polished stainless steel or matt black.

SAFETY

The Evolution 3D Bumper has passed many dynamic crash tests in Australia to ensure it adheres to the existing safety systems for example, air bags. Air bags must fire at the right time. The Evolution 3D Bumper is airbag compatible and certified.

AIRFLOW

Our bumpers have been tested to provide maximum airflow to all the necessary cooling parts of your engine.

INSTALLATION

The new Evolution 3D Bumper is the first modular, three-piece designed bumper replacement. This is what differentiates it from all other replacement bumpers. The standard bumper on your vehicle gets removed completely and can be kept or sold.

OPTIONAL EXTRAS

- Colour coding
- Shackles
- Winch
- Spotlight mounting bar
- Spotlights
